

Customer Challenge: The client needed better understanding of Revit to improve detailed drawings, as the architect for three other campuses. They work with outside firms and their Master Plan hadn't been updated since 2014. They don't have BIM or CAD standards and would like assistance from RPI to create. They would like to set up a sheets & object library for standard furniture.

Project Goals: They own Revit and needed to learn how to use it more efficiently.

Solution: We did train discovery, developed curricula and delivered custom training remotely.

Conclusion: Training went well. They would like RPI to work with them on setting up BIM/CAD Standards for their first time. They want to do more advanced Revit training in the future.
